

FRAME

Frame transforms scattered photos into shared, organized memories
by automatically collecting, curating, and synchronizing albums across groups.

GR5: Low-Fi Prototype Sketching Report

University of California, Santa Barbara

February 13, 2026

Brainstorming Output

Phone: Selective Audience Sharing

User finds a share-ready album automatically created from an event that can then be shared with intended audience

Phone: Event Auto-Album Creation & Sharing

User sends different versions of the same album to friends, family, or private groups

AR Glasses: Location-Based Memory Viewer

User revisits a place and sees floating albums tied to memories captured there.

Watch: Proximity Share Trigger

When friends nearby also attended the event, watch prompts quick sync

Phone: Gallery-Integrated Smart Sharing

User selects photos in their native gallery and sends them directly to people detected in the images

Desktop: Collaborative Album Editing

Friends co-edit a shared album remotely like Figma for memories

AR Glasses: Immersive Memory Reliving

User browses shared memories in a spatial gallery around them

AR Glasses: Live Group Memory Space

During an event, users wearing AR glasses see a shared memory space where photos taken by everyone appear in real time.

Phone: Live Collaborative Upload

During an event, users upload photos into a shared album in real time as memories happen

Desktop: Drag-and-Drop Memory Distribution Workspace

User upload photos and drags them into audience zones like Friends, Family, or Private to distribute memories intentionally.

Tablet: Group Album Curation Table

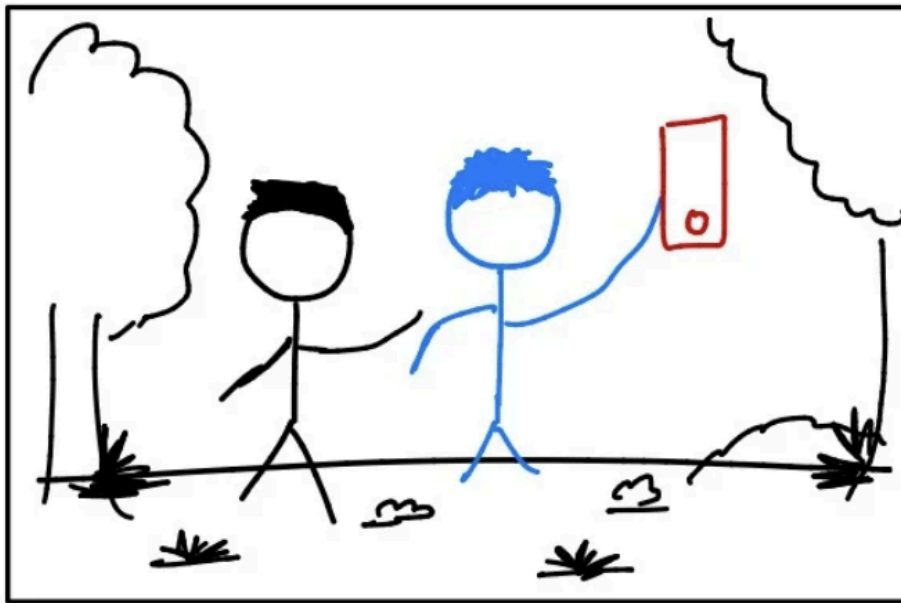

Friends sit together after a trip and collaboratively sort photos into a shared album which is better with a bigger screen

Phone: Temporary Memory Sharing

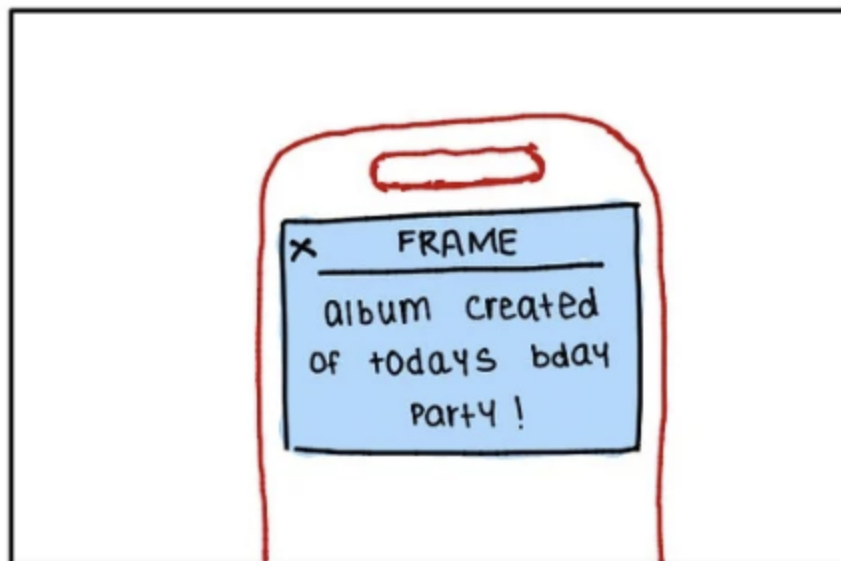

User shares party photos that automatically expire after a chosen time window.

Concept Sketches - Realization 1

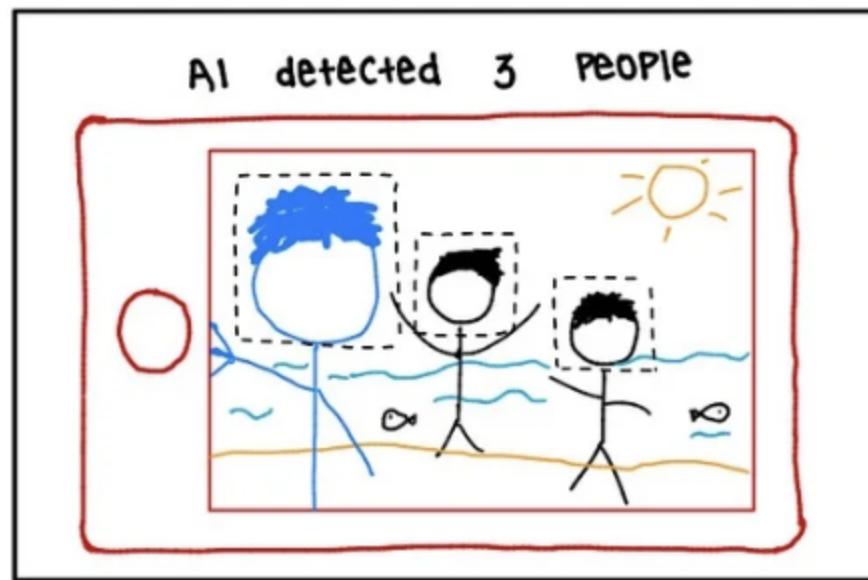

Phone: Event Auto-Album Creation & Sharing

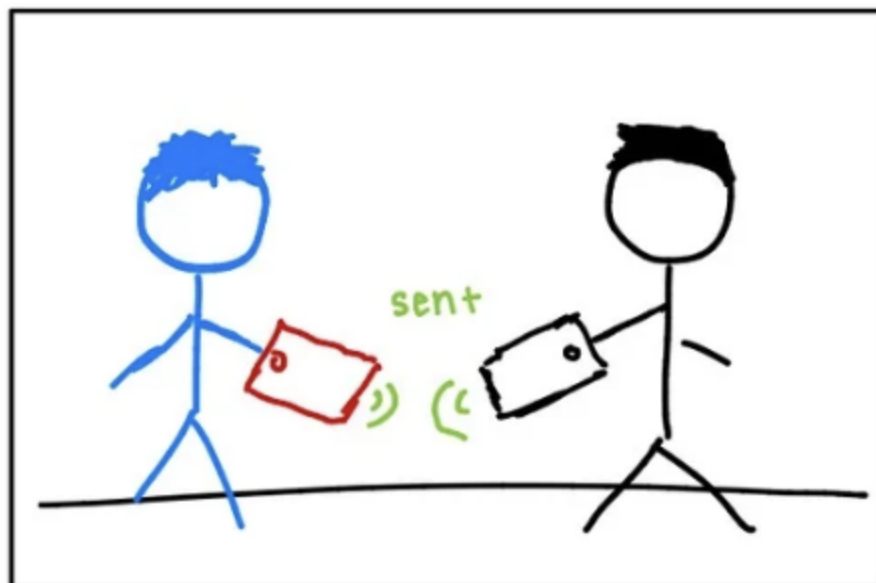

User allows gallery access so the app can gather event photos

User reviews an auto-created album based on shared memories

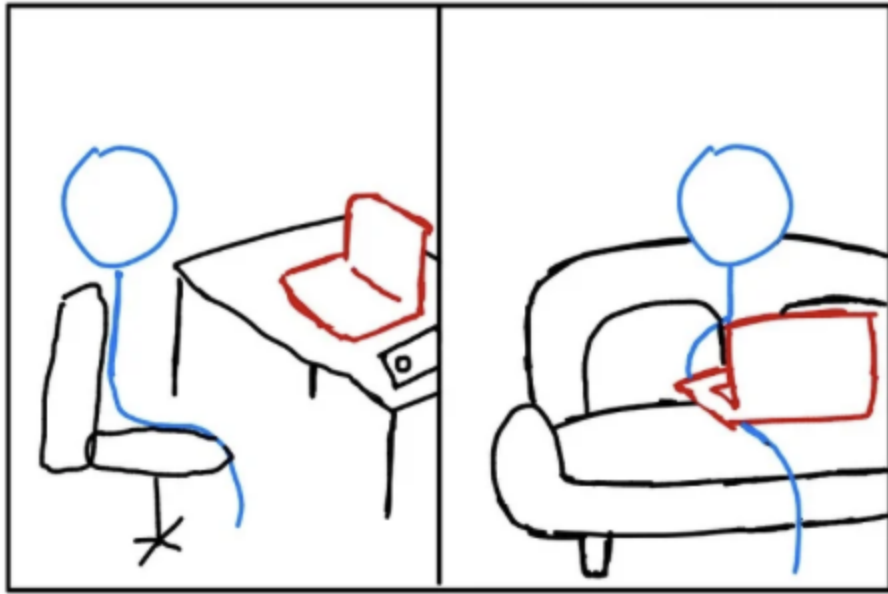

User sees suggested recipients based on people detected in the photos

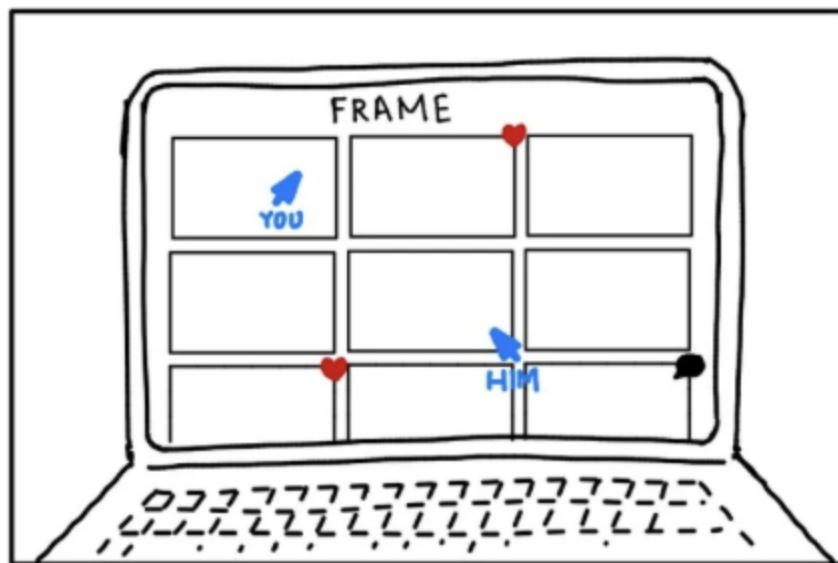

User can do cross-platform album delivery so everyone can access it.

Concept Sketches - Realization 2

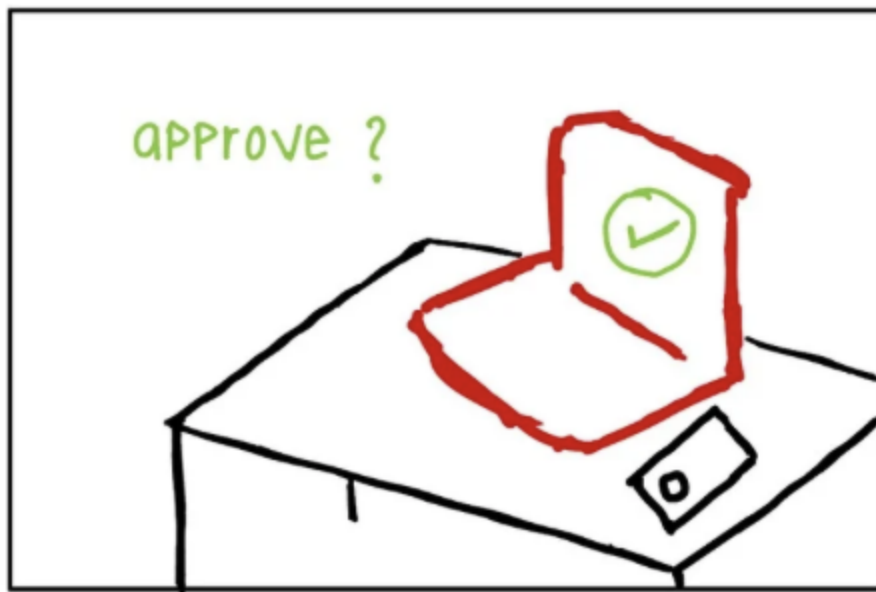

Desktop: Collaborative Album Editing

Friends access a shared album together from different locations

Friends organize and curate photos collaboratively in real time

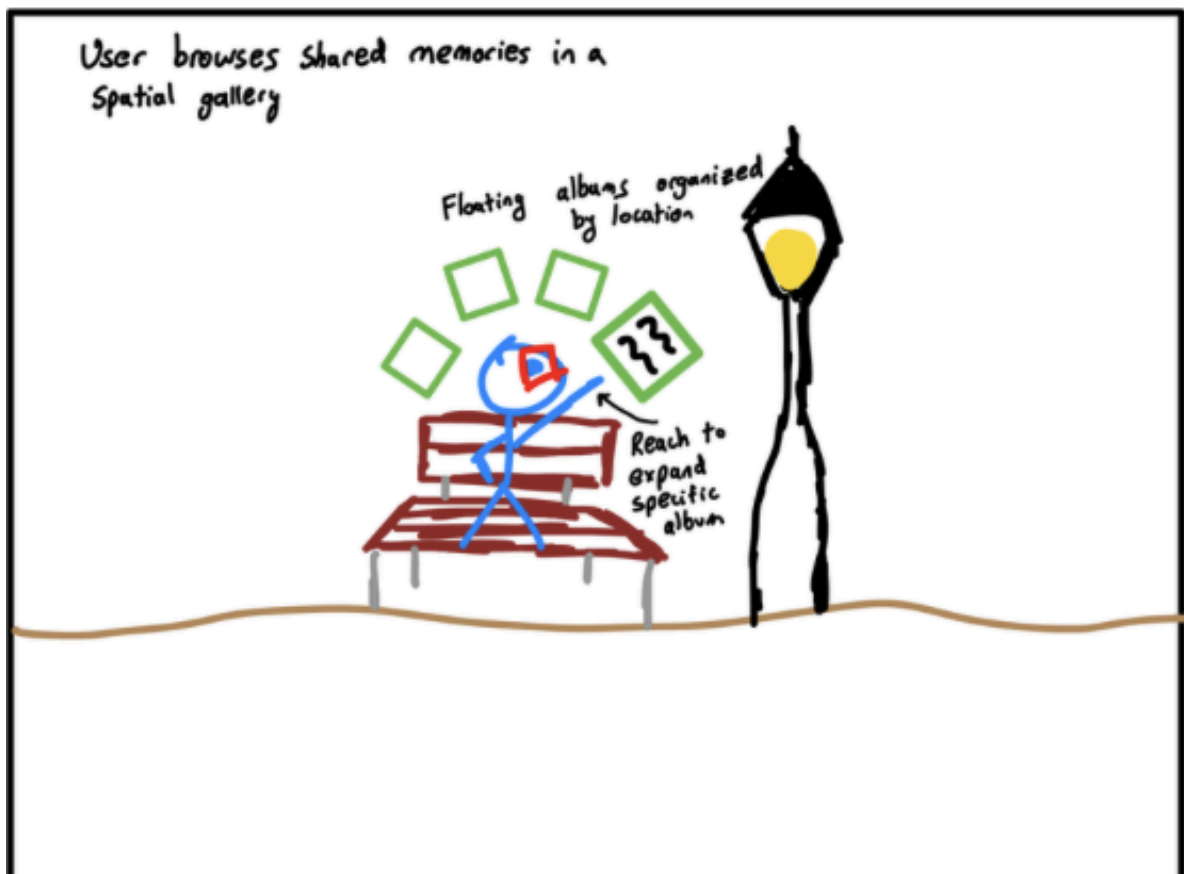

Friends review and finalize the album before sharing it

Concept Sketches - Realization 3

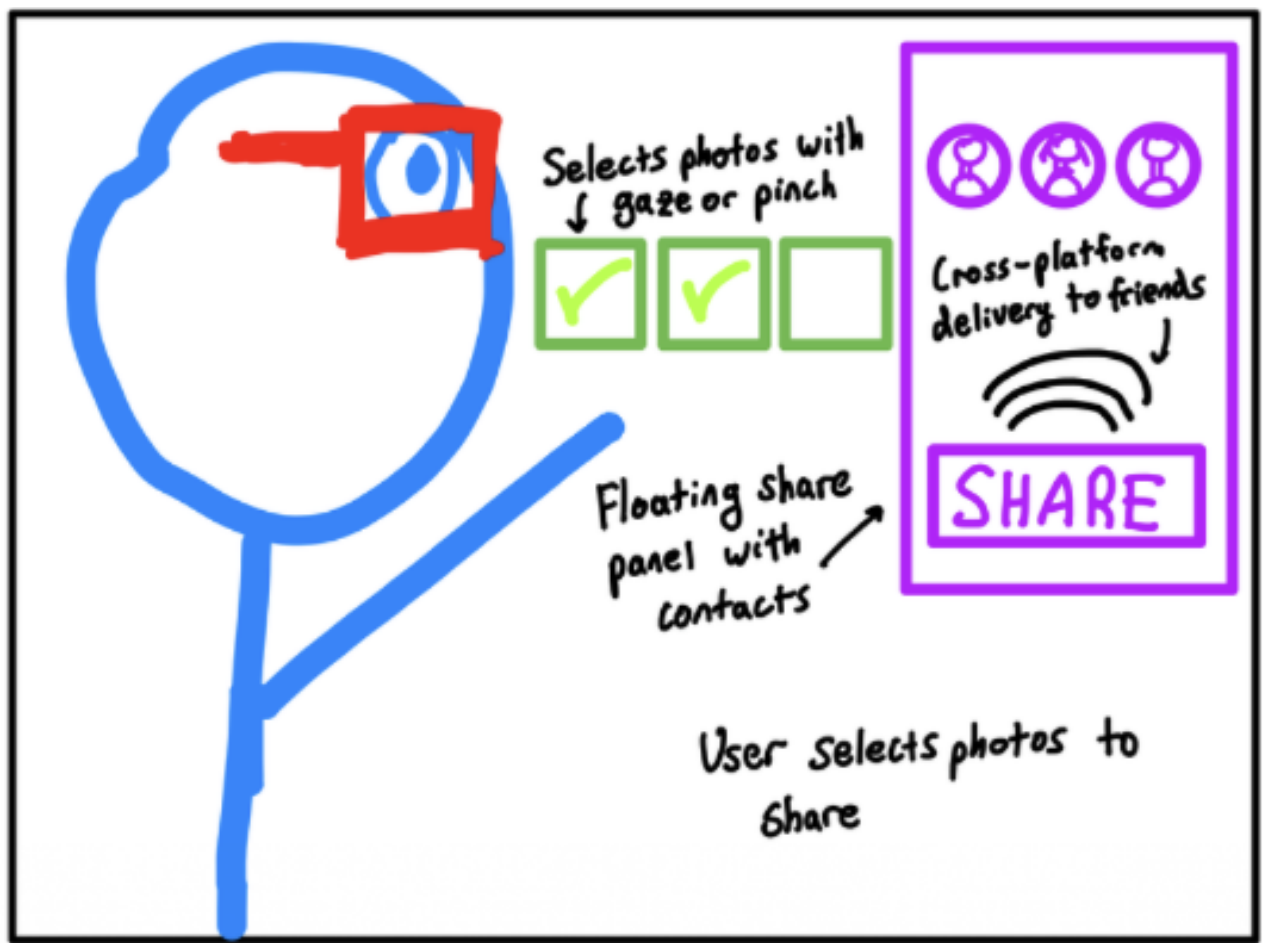

AR Glasses: Location-Based Memory Viewer

Friends access a shared album together from different locations

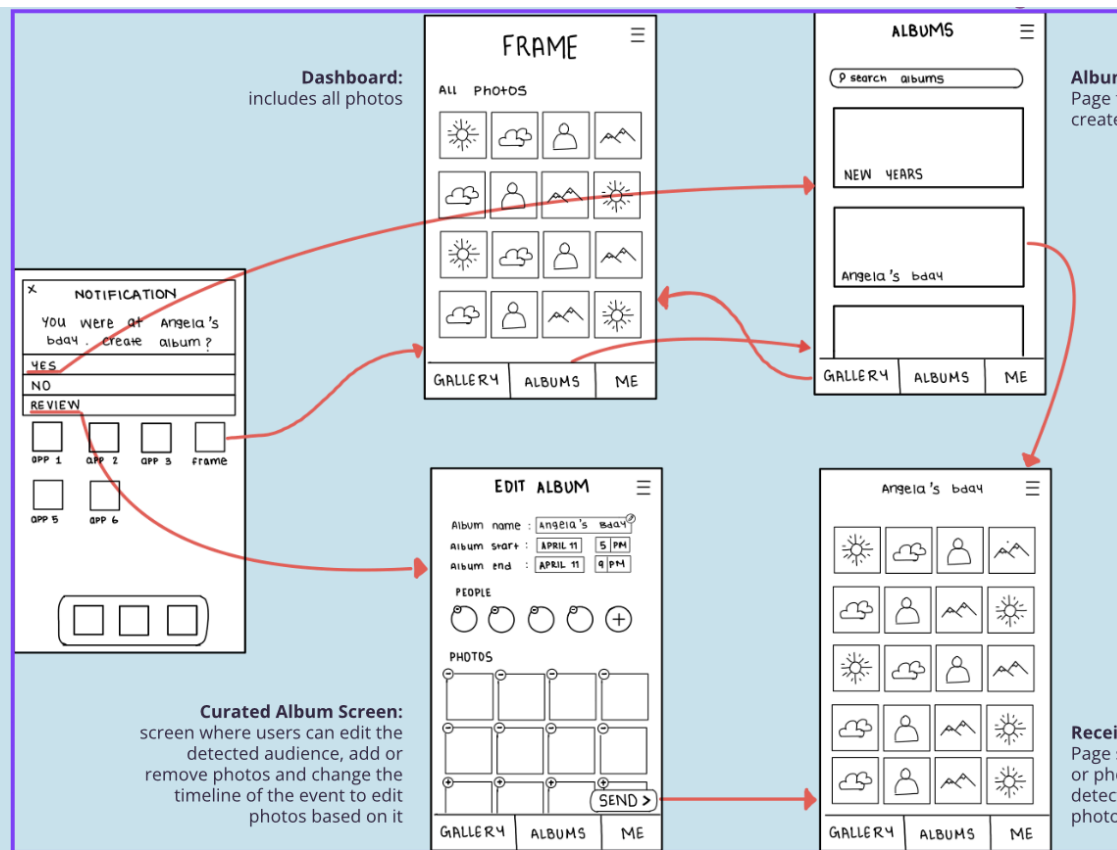

Friends organize and curate photos collaboratively in real time

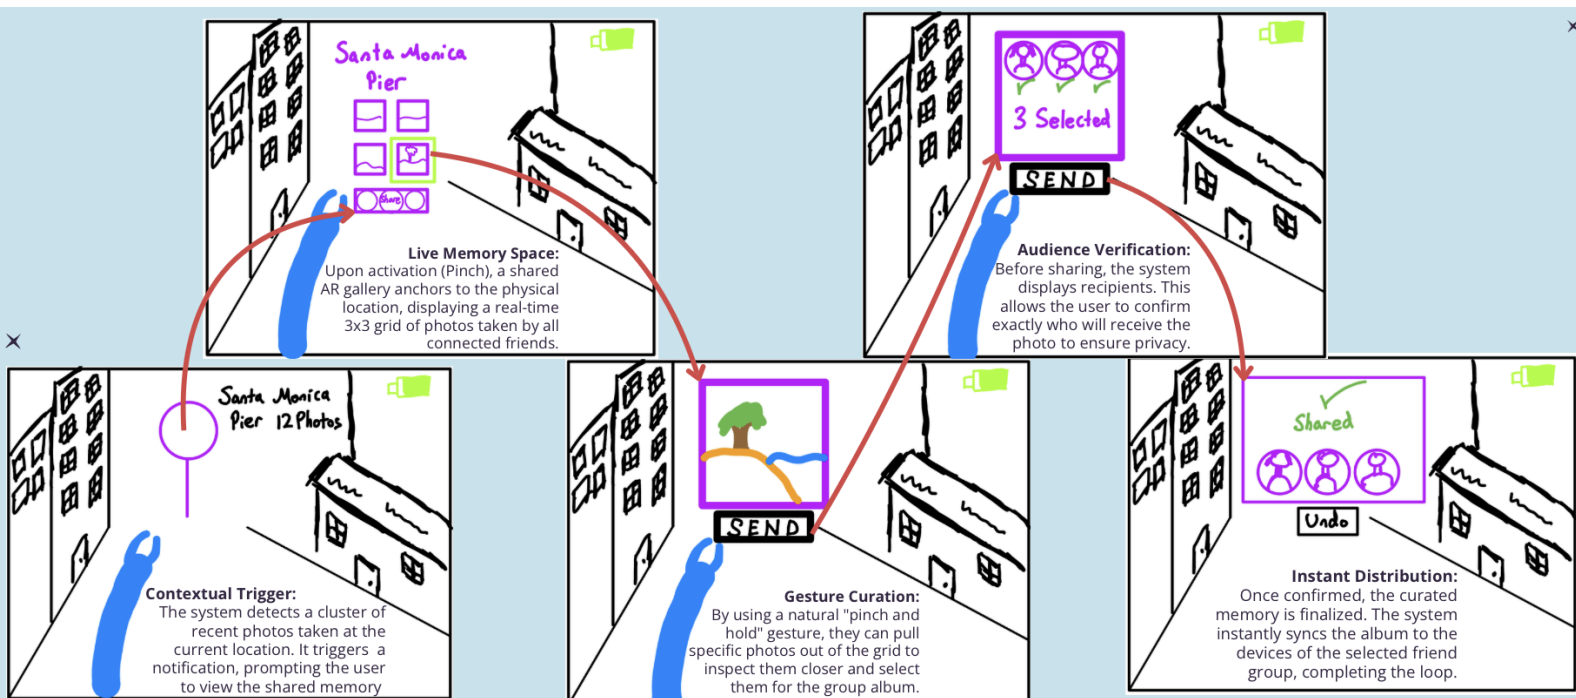

Friends review and finalize the album before sharing it

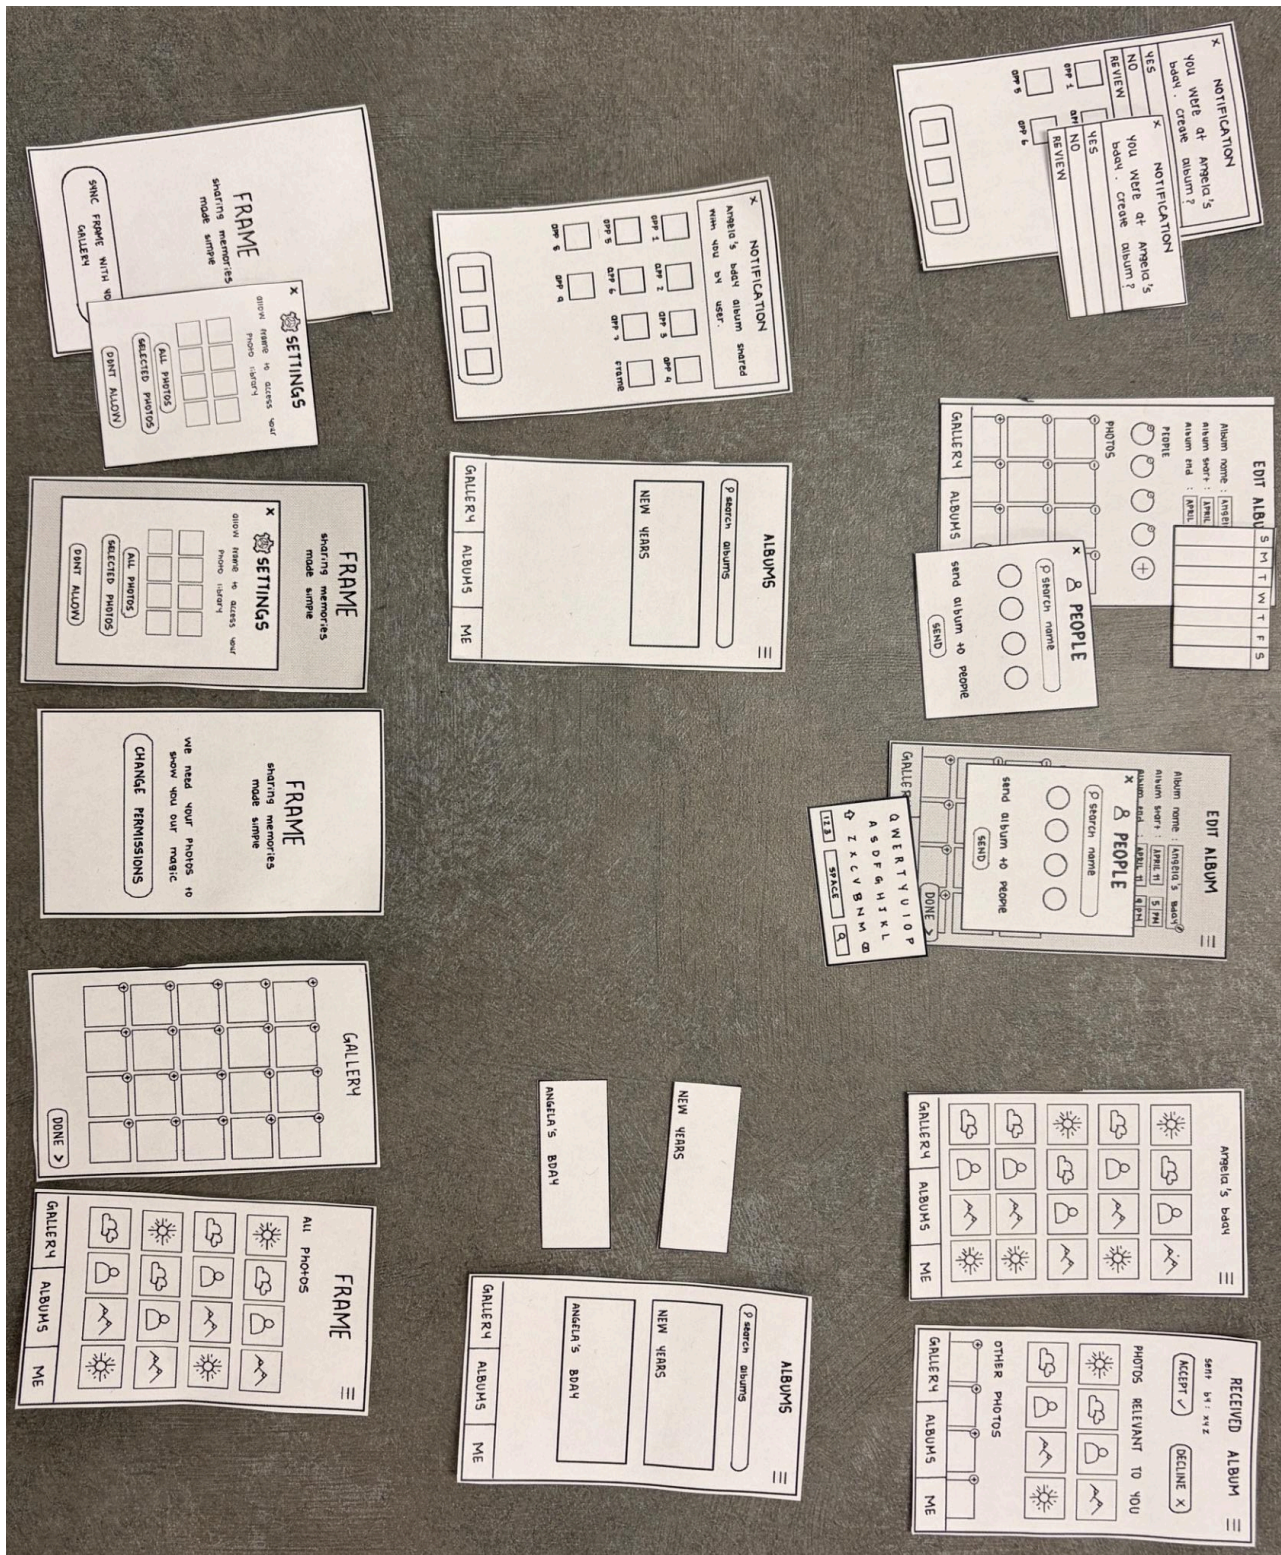

Key Screen - Realization 1 - Phone

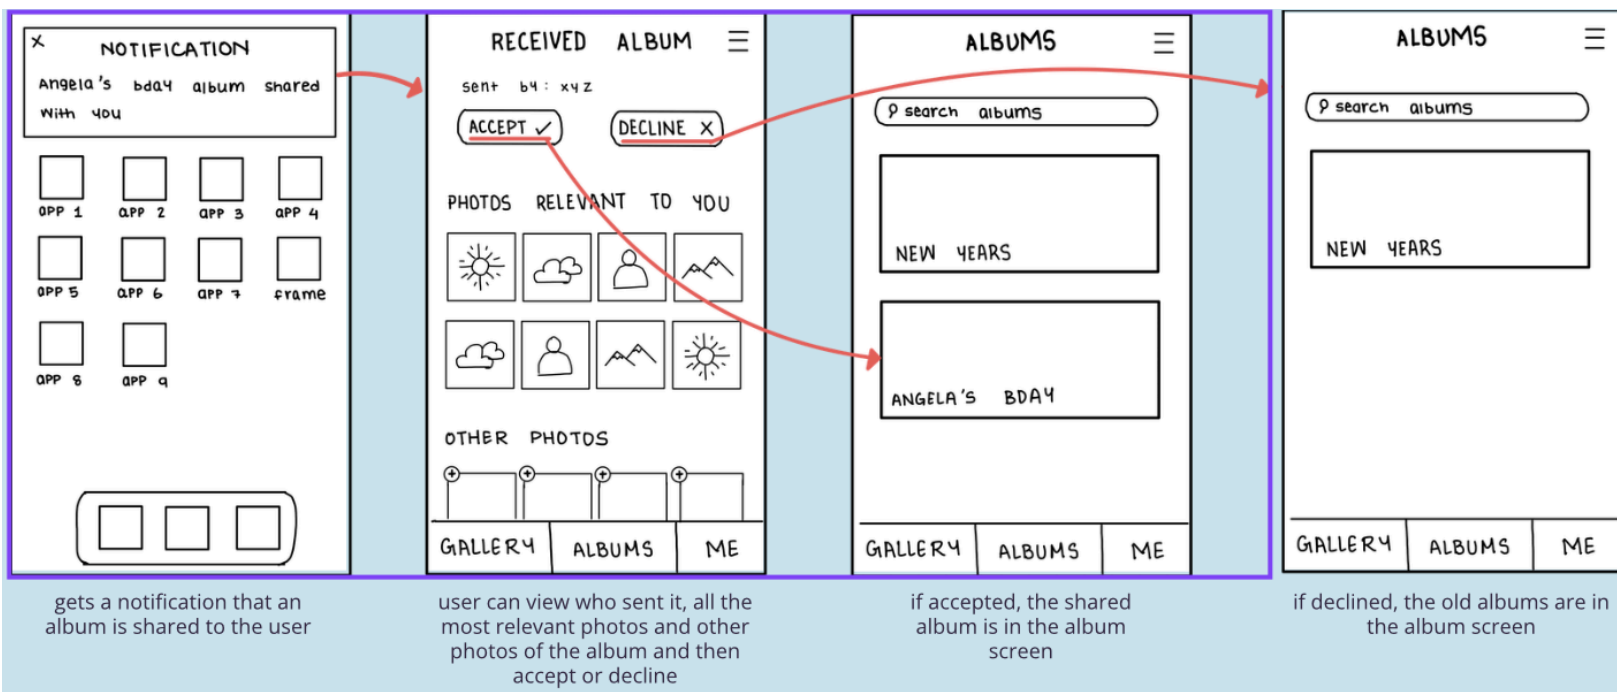

Key Screen - Realization 2 - AR/VR
